

beautiful is our proposal for the Allariz garden festival 2013.

it's a vertical garden. it consists of 7 letters, made of steel gabion cages, forming the word beautiful. the cages are filled with earth/granulate, contained in geotextile. the letters are planted with flowering species: the species selected attract butterflies.

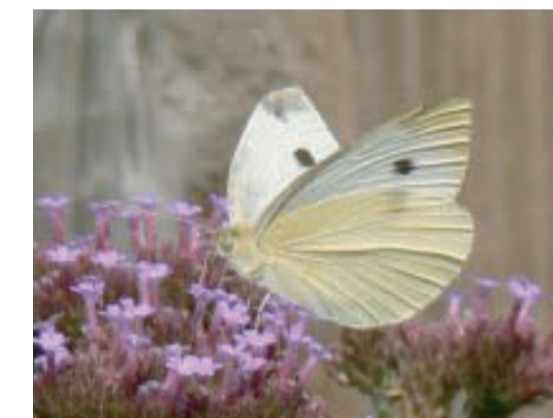

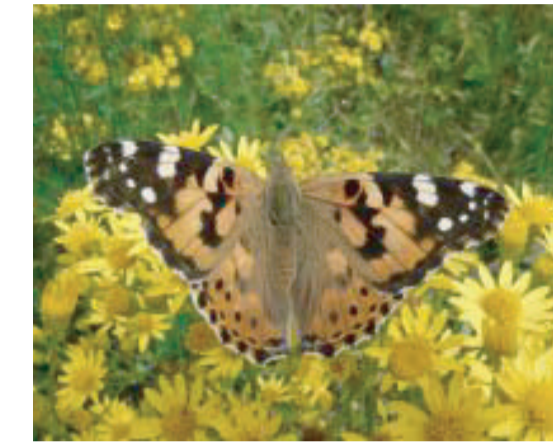

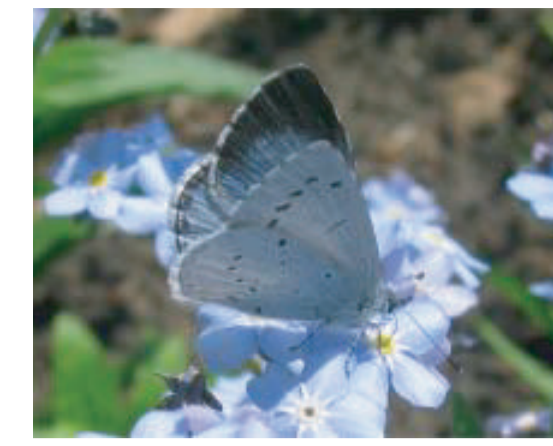

offcourse it's a literal interpretation of the theme 'beleza que inspira'. but more than that, it's a tribute to the colors, smells and natural treasures of Allariz and surroundings.

the letters can be positioned in one of the gardens, but we advise to place them in the entrance area of the festival, thus lifting the festival directly to an international level.

who are we **labdue** is a laboratory that produces designs for the urban exterior. it is founded in 2010 by the italian artist angelica de maria and the dutch landscape architect william jans. in labdue they combine 20 years of experience in the visual arts and public space design.

labdue aims to mix a 'nordic cool' approach to architecture with a 'mediterranean passion' for decoration.
